WELCOME · MURAKAZA NEZA

Welcome to EAIFR

Established in 2018, EAIFR is a young and dynamic international hub for higher education and research in basic sciences in Africa. It is a UNESCO Category II institute working in partnership with the government and university of Rwanda, and the Abdus Salam International Centre for Theoretical Physics (ICTP).

OUR VISION

- Create a community of African scientists in an international network for basic science
- Address African challenges in natural hazards, energy, climate, materials & health
- Deliver academic excellence — quality over quantity

What We Do

Research · Education · Conferences · Schools · Workshops

SUPPORTED BY

AMBASSADE DE FRANCE AU RWANDA — Liberté Égalité Fraternité

La France au Rwanda — Ambassade de France à Kigali

Consiglio Nazionale delle Ricerche

Istituto Nazionale di Geofisica e Vulcanologia

ncst — National Council for Science and Technology

IRD — Institut de Recherche pour le Développement — France

MARVEL — National Centre of Competence in Research

ce cam

UCLouvain — FUCaM MONS

GET IN TOUCH · MUTWANDIKIRE

Contact Us

We welcome inquiries, collaboration proposals, and partnership opportunities for research and events.

LOCATION

Einstein Block, CST Nyarugenge Campus, University of Rwanda, Kigali

Muraho mwese

East African Institute for Fundamental Research

Advancing **basic science** in Africa

UNESCO · EAIFR · University of Rwanda · ICTP — The Abdus Salam International Centre for Theoretical Physics

COLLABORATIVE

Research

A dynamic hub for local and visiting scientists, with a focus on international collaborations.

Geophysics

Volcanology & Observational Seismology

The study of Earth's dynamics and its interior is essential for a better understanding not only of earthquakes and volcanoes, but also of the interactions between the solid Earth, the atmosphere, and the biosphere. It also contributes to addressing the challenges posed by climate change, natural hazards (landslides, floods), resources (water, minerals, energy), and societal risks (e.g., health impacts). Our team combines theoretical and numerical modeling and high-resolution seismic tomography to study intraplate earthquakes and volcanism such as in the East African Rift.

Condensed Matter Physics

Materials Discovery & Biophysics

We investigate the fundamental properties of matter at different scales via advanced computational methods. Working within a broad collaborative network, we develop and apply state-of-the-art algorithms for electronic structure, computational statistical mechanics, machine learning and data driven approaches. Applications range from quantum technologies, to the discovery of novel materials, to biophysics and drug design.

PARTNERS	VISITORS	PUBLICATIONS
32+	27+	48+
institutions worldwide	lecturers & researchers	peer-reviewed publications

ADVANCED

Education

An exciting centre for training the next generations of talent from Rwanda, Africa and beyond.

WE OFFER

- Internationally accredited M.Sc. and Ph.D. in Physics
- Scholarships for fully funded tuition
- An international network of visiting lecturers
- Global research training opportunities building on local mentorship
- Diplomas from the University of Rwanda

GLOBAL NETWORK

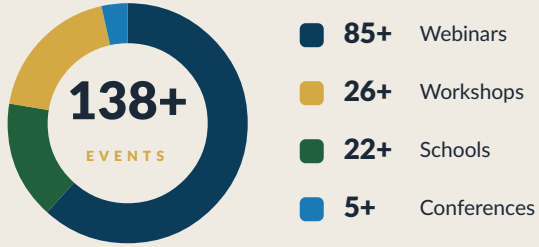

SCIENTIFIC

Events

A key node for physics networks in Africa, hosting ~5 scientific meetings or schools per year, often in collaboration with ICTP.

50+

Average conference participants — including Nobel Laureates, distinguished scientists & students from around the world, since 2018.
